## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 4, 7 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Jurmann (US 5,167,735).

With respect to claims 4, 7 and 10, Jurmann ('735) discloses a method of controlling generation of a boron oxide (i.e. white powder) in a bright annealing furnace comprising reducing and maintaining a oxygen or water content (i.e. partial pressure of steam as claimed) within the furnace to less than  $1 \times 10^{-5}$  to suppress formation of boron oxide compounds from boron contained within steel strips in the furnace (col. 1, line 38 to col. 3, line 20 and claim 1).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 5, 6, 8, 9, 11 and 12 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Jurmann ('735) in views of JP 57-035620.

With respect to claims 5, 6, 8, 9, 11 and 12, the teachings of Jurmann ('735) have been discussed in the paragraph above.

With respect to claims 5, 6, 8, 9, 11 and 12, Jurmann ('735) does not disclose the claimed features. JP ('620) discloses a method for controlling furnace gas for bright annealing comprising introducing a hydrocarbon gas (i.e. a gas having both hydrogen and carbon components) inside of the furnace to prevent oxidation of the steel strip (abstract). JP ('620) further suggests that a carbon can be introduced inside of the furnace for the same purpose (Detailed Explanation of the Invention, orally translated by a USPTO translator), which reads on the claimed feature of the instant claim 6. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the method of JP ('620) in the process of Jurmann ('735) as disclosed by JP ('620) in order to improve the brightness of the steel strip and to prevent oxidation and decarburization of the steel strips as disclosed by JP ('620) (abstract).
